

Recommendation letter:
Mads Kjærgaard Christensen

I had the pleasure of having Mads as a participant at my course: Programming during the spring of 2020. The course requires students to specify and create complex applications, assess the properties of algorithms, data structures, use integrated development tools (IDE/IntelliJ), utilizing a version control system (git) and apply key methods and technologies to implement models in a database.

Furthermore, it requires the students to build a web-based application using the Java framework: Spring Boot in a independent & self driven project.

Mads was rewarded top-grade (12) by building a best-practice application with the addition of an outstanding report & performance.

Mads has proven to be a very capable, sharp-witted, technical competent and highly diligent individual. It is a great pleasure to recommend Mads to any and all future employer as a student or full-time position.
